Rotaract Club of Xiamen University Malaysia | Rotary Club of Kuala Lumpur Dynamics | Rotary Club of Tun Razak Exchange

SDC Hackathon

Technical Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club
Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

SDC HACKATHON 2026

Technical & Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

1. Team & Project Overview

Team Name	Africoders
Project / Solution Name	CareerAtlas AI
Name (Leader)	Azza Ladgham
Email & Phone (Leader)	+60 17-206 7172 | cst2409090@xmu.edu.my
University Affiliation(s)	Xiamen University Malaysia
Live Prototype URL	https://sdc-hackathon-jarmxl.replit.app/
Code Repository URL (public / access granted to judges)	https://github.com/azzaladgham/SDC_Hackathon

2. Architecture & Technology Stack

2.1 System Architecture Overview

Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.

[Maximum 200 words]

Skills and SDGs are chosen by the users on the React website. The frontend passes these selections to a Node.js 22 / Express 5.3 backend running with the website at another URL on Replit. A file-based matching engine is used to match the selections to 30 occupations from public EU ESCO jobs and skills data. It leverages insights from the arXiv and Hacker News data to enhance relevant skills and finetunes the results through the ILO 2025 generative-AI exposure index. With an explanation and a step-by-step pathway to reskill, each occupation is scored for both scenarios of moderate and fast AI change. The project data and snapshots are stored locally, not in a database. Matching is performed without making any external APIs or deployed AI models calls.

2.2 Languages, Frameworks & Libraries

List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.

Name & Version	Purpose in Project	License
TypeScript 5.9	Frontend and backend application language	Apache-2.0
React (version not stated in supplied documents)	User interface components	MIT
Vite (version not stated in supplied documents)	Dev server and build tool	MIT
Tailwind CSS (version not stated in supplied documents)	Styling	MIT
framer-motion (version not stated in supplied documents)	Animated re-ordering of ranked roles, Scout’s floating animation	MIT

Name & Version	Purpose in Project	License
Google Fonts: BBH Sans Hegarty and Nunito	Title and body fonts, loaded from the Google Fonts CDN	OFL
Node.js 22	Backend JavaScript runtime	MIT
Express 5.3	HTTP server and matching API	MIT
Zod 4.6	Input validation	MIT
tsx 4.23	TypeScript execution during development	MIT
Vitest 5.0	Automated tests	MIT

3. APIs & Cloud Services

3.1 External APIs

List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.

API & Provider	Purpose in Project	Access Tier (free / paid / sponsor-provided)
None (no external APIs; project uses local data files)	N/A	N/A

3.2 Cloud Platforms & Deployment

List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.

Service & Provider	Purpose in Project	Plan / Region
Google Fonts CDN	Serves the two fonts	Free
GitHub (repository)	Code hosting and pull requests	Free
Replit	Hosts React website and Node.js/Express API at one URL	SDC Hackathon sponsor-provided Replit credits
GitHub Actions	Refreshes trend snapshots	Free

Service & Provider	Purpose in Project	Plan / Region

4. AI Tools, Models & Datasets

4.1 AI Models Used in the Solution

List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.

Model & Version	Source / Provider	Usage (pre-trained / fine-tuned / self-trained)	License / Terms
None	N/A	N/A	N/A

4.2 Datasets

List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
ESCO jobs & skills	European Commission / ESCO	Public	CC BY 4.0	N
ILO GenAI exposure index (2025)	International Labour Organization (ILO)	Public	ILO publication/data reuse terms	N

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
Trend snapshots (arXiv / Hacker News)	Project files derived from arXiv and Hacker News	Public-source derived	arXiv API terms; Hacker News Algolia API/provider usage terms	N

4.3 AI-Assisted Development Tools

Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.

Did your team use any generative-AI tool to help create code, design, text, or other project material?

☑ Yes ☐ No

If yes, list them below:

Tool & Version	**Used For**	**Extent of Use (minor / moderate / major)**
Claude (Anthropic), Claude Sonnet 5.5	Guidance for project planning and code for the frontend: components, styling, git help	Moderate
Claude Opus 5.5 (Anthropic)	AI-assisted development of the project, including implementation guidance and code support	Moderate

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

[Maximum 100 words]

The frontend code was written primarily by the member in charge and with the help of Claude. Every change was pasted in by a team member in charge, run in the browser, and checked screen by screen before commit. Changes went through branches and pull requests. We tested the main flow (name, country, skills, results, role detail, pathway) after each step, and fixed errors ourselves. Data shown on screen comes from files produced by teammates. We understand the code we submitted and take responsibility for it.

5. Sponsor-Provided Resources

Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.

Did your project use any official SDC sponsor-provided resource?

☑ Yes ☐ No

If yes, list them below:

Sponsor	**Resource (API / credits / platform / data)**	**How It Was Used in the Project**
SDC Hackathon	Replit cloud hosting credits	Sponsor-provided credits used to deploy and test the CareerAtlas AI web prototype (as declared in preliminary proposal).

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

[Maximum 100 words]

Replit was not essential to the matching algorithm itself, the Node.js/Express application and static frontend could be deployed on another compatible hosting provider.

6. Security, Privacy & Responsible Use

6.1 Data Handling & Privacy

What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.

[Maximum 150 words]

Only selected skills are passed on to the matching engine from the React frontend. No names or other personal information is passed to the matching engine. These selections are not stored and not passed on to third-party APIs. No Database, matching with public dataset and local project files. The site might download fonts from the Google Fonts CDN, where it may upload normal connection information, including IP address.

6.2 Known Limitations & Risks

Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.

[Maximum 150 words]

Trend indicators are drawn mainly from arXiv and Hacker News, which emphasize technology and English-language activity. Consequently, technical occupations have richer trend signals than other jobs. The matching catalogue covers 30 ESCO occupations and may not represent the full labor market. ILO generative-AI exposure is an indicator of task exposure, not a prediction of job loss. Moderate and fast AI-change scores are scenario estimates, not guarantees. The tool is intended to support, rather than replace, career decisions.

7. Compliance & Readiness Checklist

Tick all boxes that apply before submitting.

- ☑ All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.
- ☑ All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.
- ☑ No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.
- ☑ Any use of generative-AI tools for development has been disclosed and reviewed by the team.
- ☑ Any use of official SDC sponsor resources has been declared in Section 5.
- ☑ The prototype described here is accessible to judges through the links provided in Section 1.
- ☑ All fields in this template have been completed within the word limits stated.

8. Declaration

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team's knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.
